Diversity Engineered, Challenge - Day 7: Accomplishments

Today we're sharing some photos from our most recent in-person graduation from January. All of these members of the Kenzie Fam, and many more not shown here, have accomplished so much as students, tech professionals, and people. We're always proud of anyone working to become Kenzie Made - it's truly an achievement in and of itself 💙

Today, Software Engineering students prepared for graduation by presenting their final capstone projects! It's been 12 months since these students began their tech journeys and today they shared:

- an app for tracking, rating, and sharing albums
- a website which hosts and organizes game FAQs (and hides spoilers)
- a movie catalog and rating platform which also lets you sort items by your celebrity crush
- a coin collecting and trading site which generates 10-digit serial numbers for each coin logged
- a recipe database that allows users to share their own recipes and rate friends' submissions

Congratulations to our awesome students on this accomplishment! Now let's get ready to graduate 🎓

We'll probably never get everyone in the same photo because our team is growing so much, but here are many of the awesome people who admit, guide, and educate our students every day. Thanks for a great 2019 and happy holidays!

Two weeks ago, we welcomed 123 new students to our Software Engineering, UX Engineering, and Digital Marketing cohorts!

During this Orientation Day, on-campus students received welcomes from [Chok](#) and our team, and instructors + participated in team building activities.

Online students received the same warm welcomes, met each other, and took part in the day's events via webcam. We're so happy to watch the Kenzie Family grow and can't wait to see what these students accomplish. 💻💙
